**"Steganography and the War on Terrorism"**

By:

**Elonka Dunin**  
**Simutronics Corporation**

Saturday, February 15th, 2003, 2pm  
Indiana University South Bend  
Student Activities Center  
Room 223

After September 11th 2001, Elonka Dunin, a prize-winning game developer and cryptographer, contacted the FBI to ask if she could help with the war on terrorism. Come join her in this session, as she shares some of the same information she used in one of her FBI presentations. This is a beginner-oriented explanation of what steganography is and how it's used, and covers some of the media and academia reports on terrorists' possible use of steganography, along with Elonka's observations on how accurate those reports may be.
