

# AN INTRODUCTION TO WEB PROGRAMMING

Dr. Hossein Hakimzadeh  
Department of Computer and Information Sciences  
Indiana University  
South Bend, IN

# HTML A

# CONTENTS

- Before you begin
- A simple HTML document
- The structure of an HTML document
- HTML (tags, elements, and attributes)

# BEFORE YOU BEGIN

- You need a **text editor**:
  - PC users:
    - Download and install Notepad++ (<http://notepad-plus-plus.org/>)
  - Mac users:
    - Download TextWrangler (<http://www.barebones.com/products/textwrangler/>)

# BEFORE YOU BEGIN

- You need a few **browsers** to test out your HTML code and make sure that it works in different browsers:
  - Google Chrome: [www.google.com/chrome](http://www.google.com/chrome)
  - Mozilla Firefox: [www.mozilla.org/firefox/new](http://www.mozilla.org/firefox/new)
  - MS Internet Explorer: [www.microsoft.com/ie](http://www.microsoft.com/ie)
  - Apple Safari: [www.apple.com/safari](http://www.apple.com/safari)
  - Opera: [www.opera.com](http://www.opera.com)

# HTML

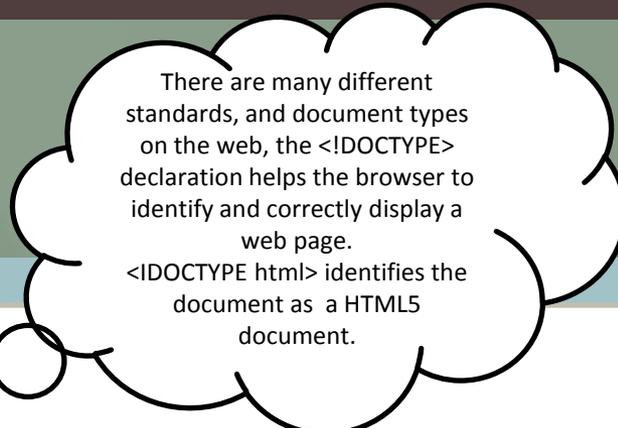

- HTML stands for **H**yper **T**ext **M**arkup **L**anguage.
- It is a language for describing creating web pages.
- HTML consists of “normal text” and markup “tags”.
- Most “tags” have a open and close tag. (but not all)
  - `<html> .... </html>`
  - `<body> .... </body>`
  - `<p> ..... </p>`
  - `<center> ..... </center>`

## Example:

```
<!DOCTYPE html>
<html>
<body>
  <center>
    <h1>CSCI-A340 Introduction to Web Programming</h1>
  </center>

  <p>P: CSCI-A 201 or CSCI-C 101 or INFO-I210. An introduction
to programming web documents, including HTML,
JavaScript, and PHP. Creation of a simple website,
including a home page with dynamic elements, using both
client-side and server-side techniques.</p>

</body>
</html>
```

There are many different standards, and document types on the web, the `<!DOCTYPE>` declaration helps the browser to identify and correctly display a web page.  
`<!DOCTYPE html>` identifies the document as a HTML5 document.

# OUTPUT

# THE STRUCTURE OF AN HTML DOCUMENT

- An HTML document contains the following basic elements:
- DOCTYPE tag defines the document type (in this case HTML).
- `<html> .... </html>` tag which describes the web page.
- `<head>.... </head>` tag describes the header information of the web page.
- `<body> .... </body>` is the visible (renderable) page content.
- `<h1> .... </h1>` is displayed as a heading.
- `<p> .... </p>` is displayed as a paragraph.

## HTML Page Structure

Below is a visualization of an HTML page structure:

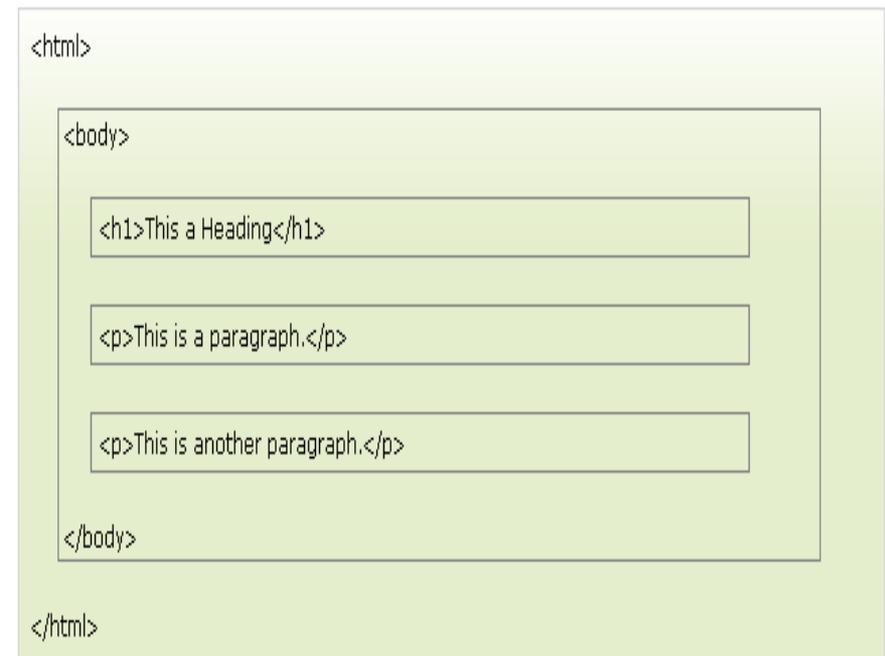

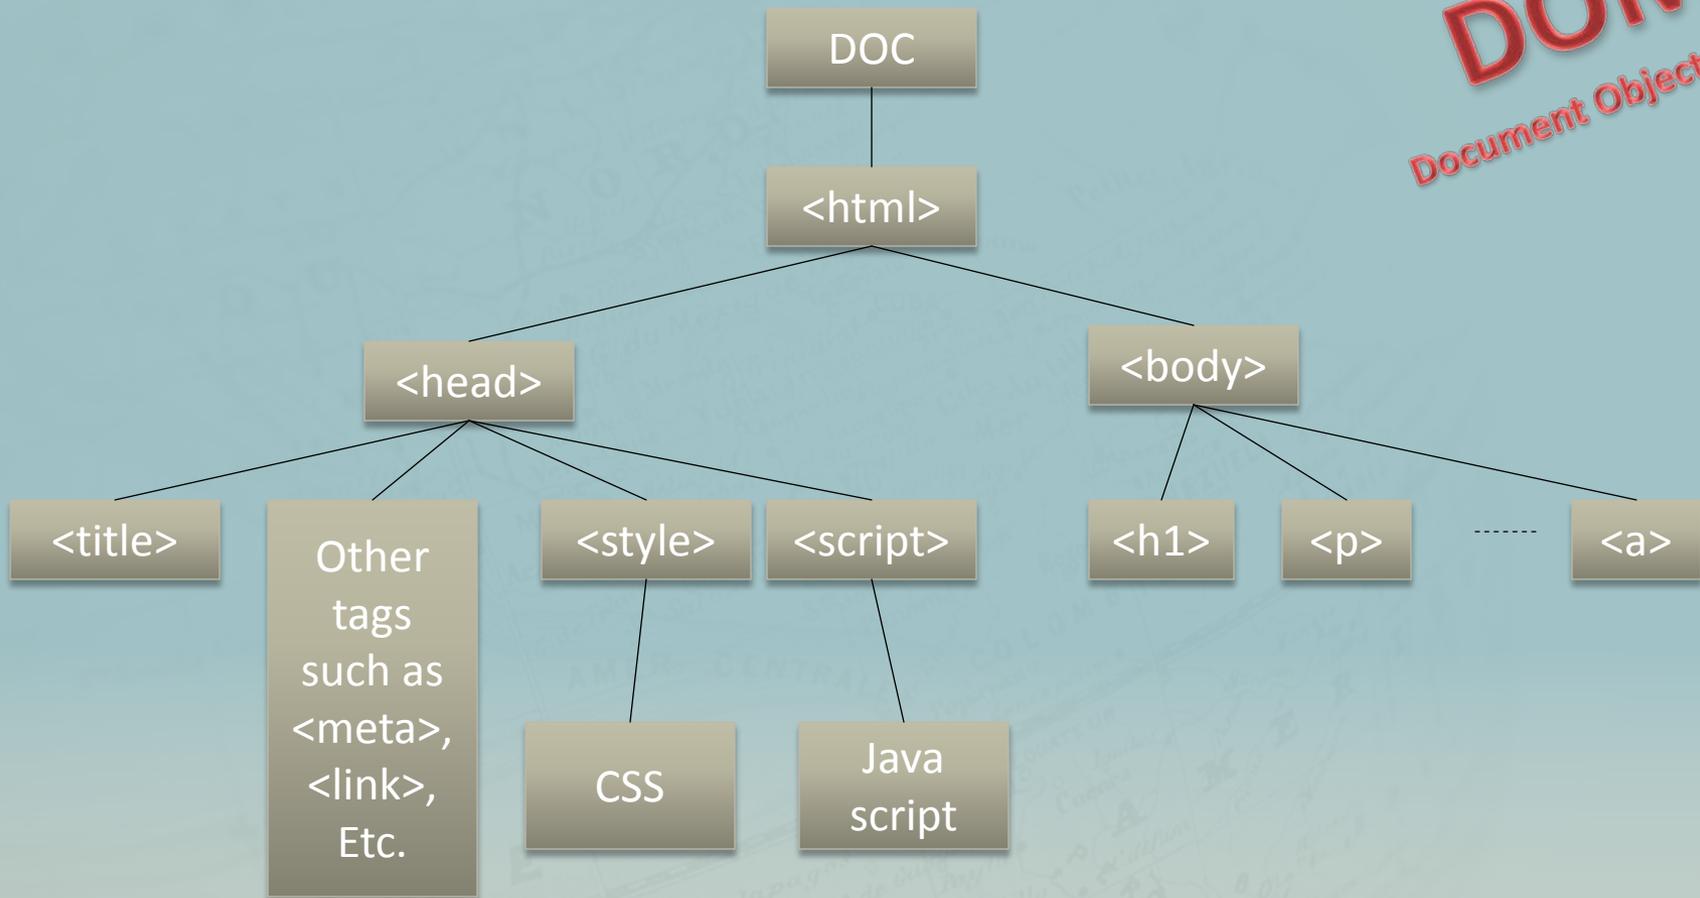

Image obtained from  
[http://www.w3schools.com/html/html\\_intro.asp](http://www.w3schools.com/html/html_intro.asp)

# THE DOCUMENT OBJECT MODEL?

- DOM is an Application Programming Interface (API) for HTML and XML documents.
- It defines a structure of the document, and how it can be accessed.

# THE STRUCTURE OF AN HTML DOCUMENT

**DOM**  
Document Object Model

# AN INTRODUCTION TO WEB PROGRAMMING

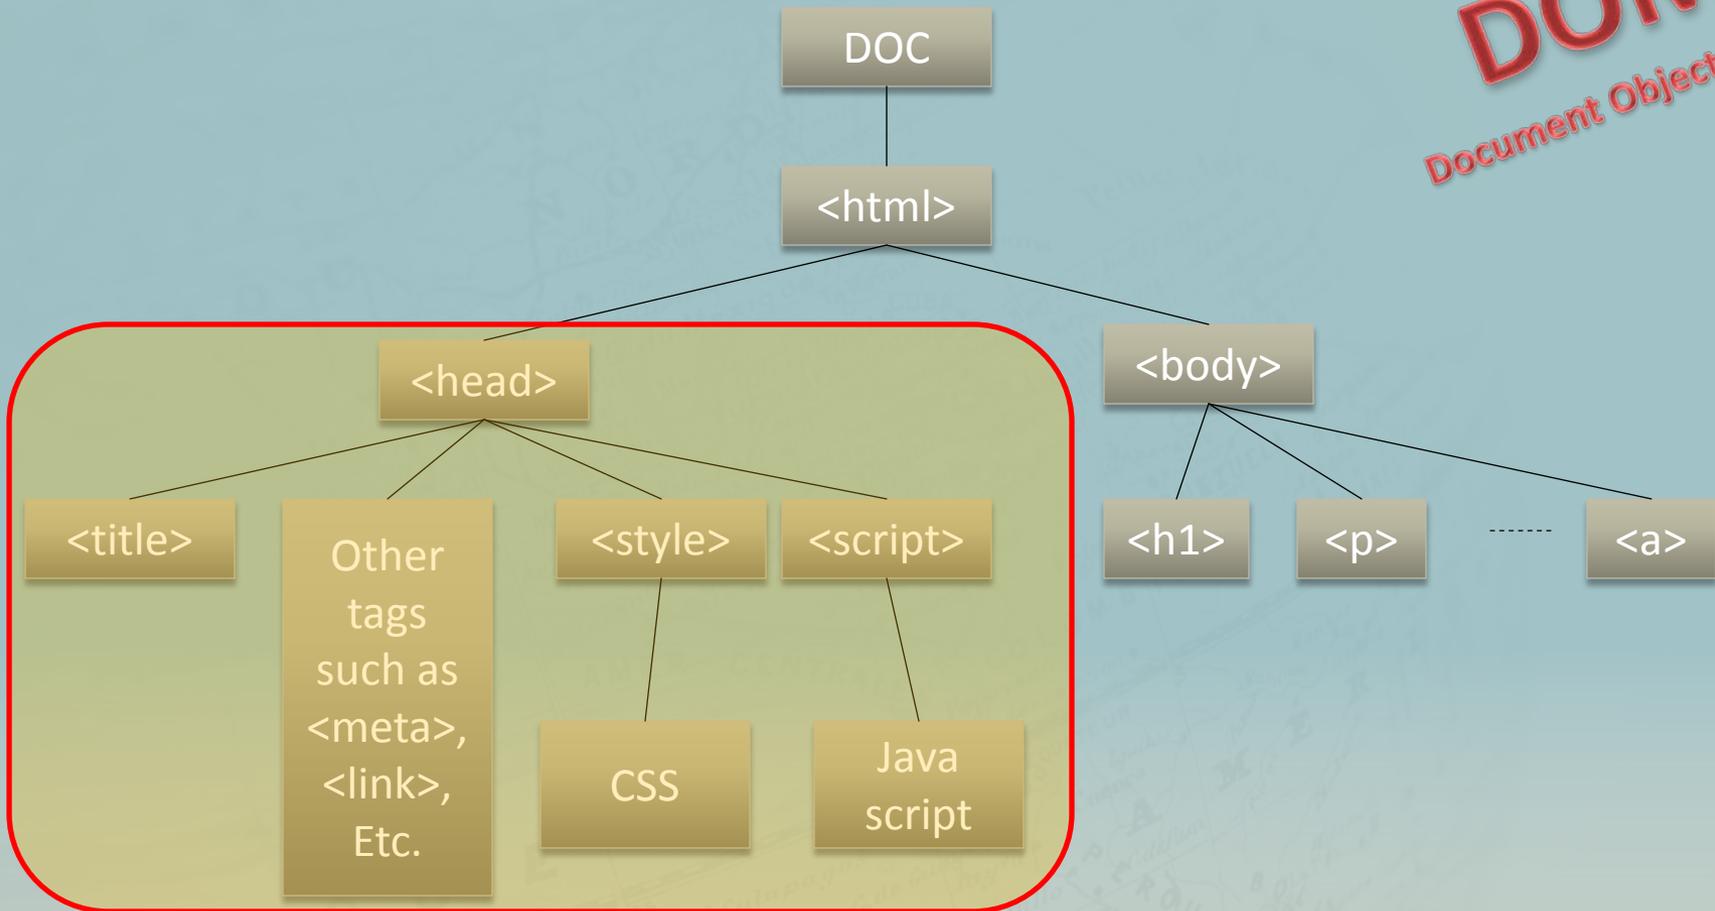

Dr. Hossein Hakimzadeh  
Department of Computer and Information Sciences  
Indiana University  
South Bend, IN

**HTML  
B**

# THE STRUCTURE OF AN HTML DOCUMENT

**DOM**  
Document Object Model

# <HEAD> TAG

- What can be inside a <Head> Tag?
  - **<title>** the title of the document **</title>**
  - **<meta>** meta data about the document
  - **<base>** the default address for all “relative” links on the page
  - **<style>** CSS style information **</style>**
  - **<link>** mostly used to connect to a CSS style sheet
  - **<script>** client-side script **</script>**

# INSIDE A HEAD TAG:

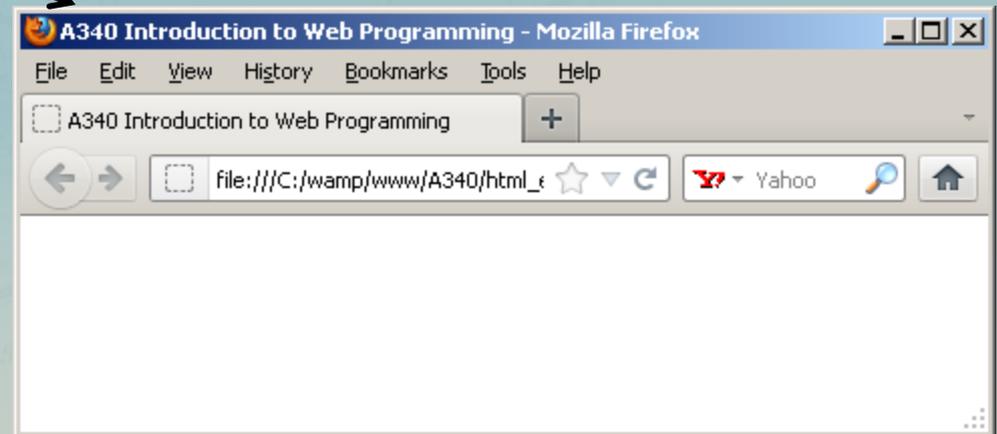

## <title> Tag

```
<!DOCTYPE html>  
<html>
```

```
<head>  
  <title>A340 Introduction to Web Programming</title>  
</head>
```

```
<body>
```

```
</body>  
</html>
```

# INSIDE A HEAD TAG:

## <meta> Tag

- The <meta> tag provides metadata about the HTML document.
- Metadata will not be displayed on the page, but it will be **machine readable**.
- Metadata can be used by browsers, search engines, or other web services.

### • Example:

- **Default character set:**
  - `<meta charset="UTF-8">`
- **Define keywords for search engines:**
  - `<meta name="keywords" content="HTML, CSS, JavaScript, PHP, CSCI-A340, Indiana University South Bend">`
- **Define a description of your web page:**
  - `<meta name="description" content="Introduction to Web Programming">`
- **Define the author of a page:**
  - `<meta name="author" content="Hossein Hakimzadeh">`
- **Refresh document every 60 seconds:**
  - `<meta http-equiv="refresh" content="60">`

# INSIDE A HEAD TAG:

## <Base> Tag

- <base> the default address for all links on the page.

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<base href="https://retain.iusb.edu/retain/public/images/" >
```

```
</head>
```

```
<body>
```

```

```

```

```

```

```

```
<a href="campus4.jpg">show this link</a>
```

```
</body>
```

```
</html>
```

Retention Results: 1996 to 2012

Year	Persistence to Second Semester	Persistence to Second Year
1996	84.0%	84.0%
1997	84.0%	84.0%
1998	84.0%	84.0%
1999	84.0%	84.0%
2000	84.0%	84.0%
2001	84.0%	84.0%
2002	84.0%	84.0%
2003	84.0%	84.0%
2004	84.0%	84.0%
2005	84.0%	84.0%
2006	84.0%	84.0%
2007	84.0%	84.0%
2008	84.0%	84.0%
2009	84.0%	84.0%
2010	84.0%	84.0%
2011	84.0%	84.0%
2012	84.0%	84.0%

# INSIDE A HEAD TAG:

## <Style> Tag

- <style> CSS style information </style>
- The <style> tag allows you to insert the style information right into the HTML document.

```
<!DOCTYPE html>
<html>
<head>
  <style>

    body
    {
      background-color:lightblue;
    }

    h1
    {
      color:red;
      text-align:center;
    }

    p
    {
      font-family:"Times New Roman";
      font-size:20px;
    }

  </style>

</head>
<body>
<center>
<h1>CSCI-A340 Introduction to Web Programming</h1>
</center>

<p>P: CSCI-A 201 or CSCI-C 101 or INFO-I210. An introduction to programming web documents, including HTML, JavaScript, and PHP. Creation of a simple website, including a home page with dynamic elements, using both client-side and server-side techniques.</p>

</body>
</html>
```

# INSIDE A HEAD TAG:

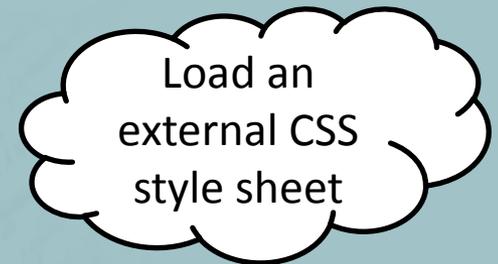

## <LINK> Tag

- <link attribute="value" attribute="value" ... >

<head>

```
<link rel="stylesheet"
      type="text/css"
      href="01_MyStyle.css">
```

</head>

More Info:

<http://www.w3.org/TR/html401/present/styles.html#style-external>

# INSIDE A HEAD TAG:

## Example of <LINK> Tag

```
<!DOCTYPE html>
<html>
<head>

  <link      rel="stylesheet"
            type="text/css"
            href="01_MyStyle.css">

</head>
<body>
<center>
<h1>CSCI-A340 Introduction to Web Programming</h1>
</center>

<p>P: CSCI-A 201 or CSCI-C 101 or INFO-I210. An introduction to
programming web documents, including HTML, JavaScript, and PHP.
Creation of a simple website, including a home page with dynamic
elements, using both client-side and server-side techniques.</p>

</body>
</html>
```

```
/* 01_MyStyle.css */

body
{
background-color:lightblue;
}

h1
{
color:red;
text-align:center;
}

p
{
font-family:"Times New Roman";
font-size:20px;
}
```

# INSIDE A HEAD TAG:

## <Script> Tag

- Java Script can be placed in both the HEAD as well as the BODY of the HTML file. In the HEADER, one can define a Java Script function which can be later called in the BODY of the file.

```
<script>
```

client-side script

```
</script>
```

```
<!DOCTYPE html>
<html>
<head>
<script>
function myAlert()
{
    alert("This is an alert box!");
}
</script>
</head>
<body>

<input    type="button"
           onclick="myAlert()"
           value="Display Alert" />

</body>
</html>
```

# THE STRUCTURE OF AN HTML DOCUMENT

**DOM**  
Document Object Model

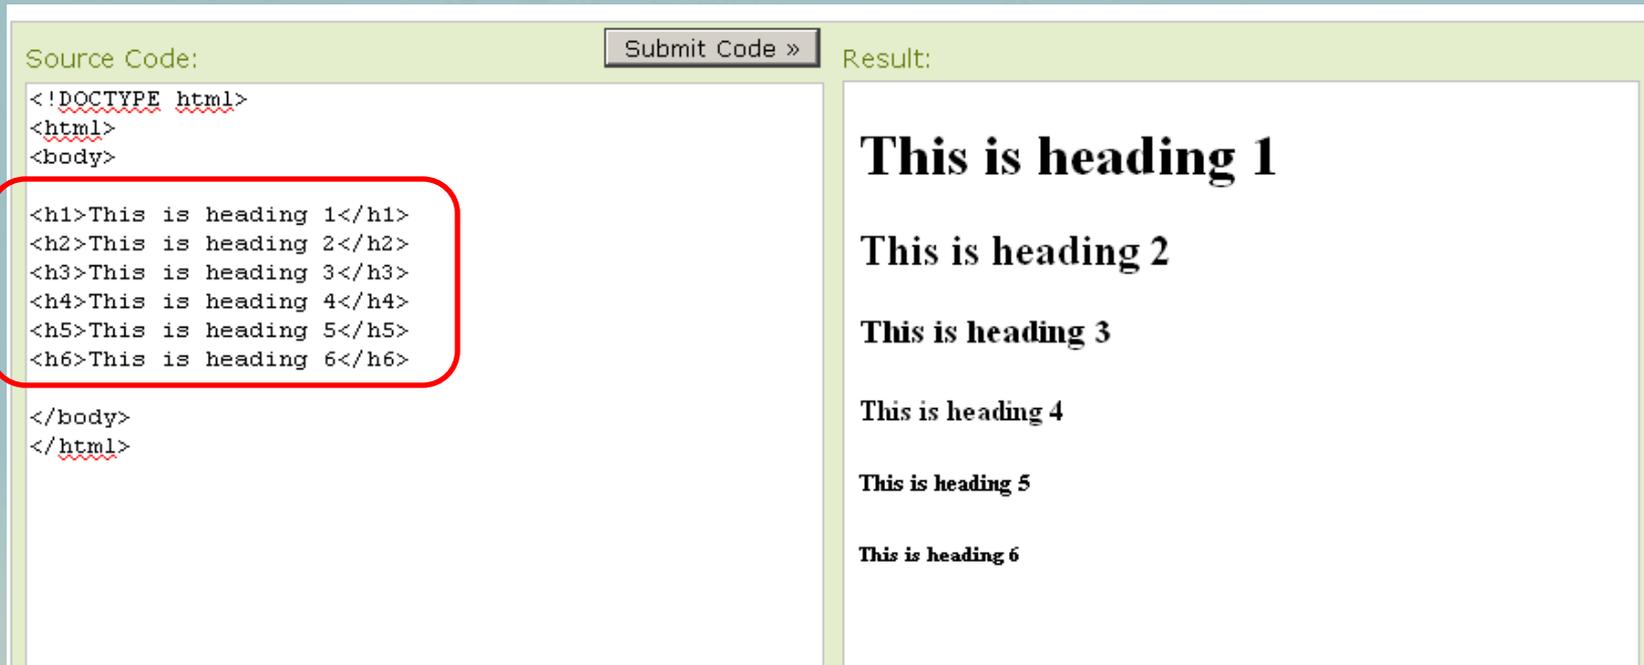

# HTML TAGS

- Documentation

Source Code:	Submit Code »	Result:
<pre>&lt;!DOCTYPE html&gt; &lt;html&gt; &lt;body&gt;  &lt;!--This comment will not be displayed--&gt;  &lt;p&gt;This is a regular paragraph&lt;/p&gt;  &lt;/body&gt; &lt;/html&gt;</pre>		<p>This is a regular paragraph</p>

# HTML TAGS

- Heading Element

The screenshot shows an HTML editor interface. On the left, the 'Source Code' panel contains the following HTML code:

```
<!DOCTYPE html>
<html>
<body>
<h1>This is heading 1</h1>
<h2>This is heading 2</h2>
<h3>This is heading 3</h3>
<h4>This is heading 4</h4>
<h5>This is heading 5</h5>
<h6>This is heading 6</h6>
</body>
</html>
```

The code lines for `<h1>` through `<h6>` are enclosed in a red rounded rectangle. A 'Submit Code »' button is located above the source code panel. On the right, the 'Result' panel displays the rendered output:

**This is heading 1**

**This is heading 2**

**This is heading 3**

This is heading 4

**This is heading 5**

**This is heading 6**

# HTML ELEMENTS AND ATTRIBUTES

- **Element:**

- An HTML element is everything from the start tag to the end tag.
- An HTML element starts with a **start tag**, and ends with an **end tag**.
- The **element content** is everything between the start and the end tag.

- **Attribute:**

- An HTML elements can have one or more **attributes**. Attributes provide **additional information** about an element.
- Attributes are always specified in **the start tag**.
- Attributes come in name/value pairs like: **name="value"**.

```
<img src = "https://retain.iusb.edu/retain/public/Slide3.JPG"  
width = "320"  
height= "240">
```

# HTML TAGS

- Horizontal rule (in HTML 4, and Thematic Break in HTML 5)

Source Code:	Submit Code »	Result:
<pre>&lt;!DOCTYPE html&gt; &lt;html&gt; &lt;body&gt; &lt;p&gt;The hr tag defines a horizontal rule:&lt;/p&gt; &lt;hr&gt;&lt;p&gt;This is a paragraph&lt;/p&gt; &lt;hr&gt;&lt;p&gt;This is a paragraph&lt;/p&gt; &lt;hr&gt;&lt;p&gt;This is a paragraph&lt;/p&gt; &lt;/body&gt; &lt;/html&gt;</pre>		<p>The hr tag defines a horizontal rule:</p> <hr/> <p>This is a paragraph</p> <hr/> <p>This is a paragraph</p> <hr/> <p>This is a paragraph</p>

# HTML TAGS

- Line Break (<br>)
- Use the <br> tag to start a new line without starting a new paragraph.

Source Code:

Submit Code »

Result:

```
<!DOCTYPE html>
<html>
<body>

<p>Notice the difference between a line
break<br>another line break<br>and a
paragraph</p>This is the next paragraph

</body>
</html>
```

Notice the difference between a line break  
another line break  
and a paragraph

This is the next paragraph

# FORMATTING TAGS

- Bold/Strong
- Italic/Emphasized
- Code
- Subscript and Superscript
- Pre (preformatted text)

Source Code:

Submit Code »

```
<!DOCTYPE html>
<html>
<body>

<p><b>This text is bold</b></p>
<p><strong>This text is strong</strong></p>
<p><i>This text is italic</i></p>
<p><em>This text is emphasized</em></p>
<p><code>This is computer output</code></p>
<p>This is<sub> subscript</sub> and
<sup>superscript</sup></p>

<pre>
This
  is
    a
      pre-formatted
        text
</pre>

</body>
</html>
```

Result:

**This text is bold**

**This text is strong**

*This text is italic*

*This text is emphasized*

This is computer output

This is subscript and superscript

This is a pre-formatted text

# TABLE TAG

- Tables start with a `<table>` tag.
- Each row starts with a `<tr>` tag.
- Each cell (table data) starts with a `<td>` tag.

Source Code: Submit Code »

```
<!DOCTYPE html>
<html>
<body>

<h4>One column:</h4>
<table border="1">
<tr>
  <td>100</td>
</tr>
</table>

<h4>One row and three columns:</h4>
<table border="1">
<tr>
  <td>100</td>
  <td>200</td>
  <td>300</td>
</tr>
</table>

<h4>Two rows and three columns:</h4>
<table border="1">
<tr>
  <td>100</td>
  <td>200</td>
  <td>300</td>
</tr>
<tr>
  <td>400</td>
  <td>500</td>
  <td>600</td>
</tr>
</table>

</body>
</html>
```

Result:

Each table starts with a table tag. Each table row starts with a tr tag. Each table data starts with a td tag.

**One column:**

100
-----

**One row and three columns:**

100	200	300
-----	-----	-----

**Two rows and three columns:**

100	200	300
400	500	600

# TABLE HEADERS

- Header information in a table are defined with the `<th>` tag.
- All major browsers display the text in the `<th>` element as bold and centered.

Source Code: Submit Code » Result:

```
<!DOCTYPE html>
<html>
<body>

<h4>Table headers:</h4>
<table border="1">
<tr>
  <th>Name</th>
  <th>Telephone</th>
  <th>Telephone</th>
</tr>
<tr>
  <td>Bill Gates</td>
  <td>555 77 854</td>
  <td>555 77 855</td>
</tr>
</table>

<h4>Vertical headers:</h4>
<table border="1">
<tr>
  <th>First Name:</th>
  <td>Bill Gates</td>
</tr>
<tr>
  <th>Telephone:</th>
  <td>555 77 854</td>
</tr>
<tr>
  <th>Telephone:</th>
  <td>555 77 855</td>
</tr>
</table>

</body>
</html>
```

Table headers:

Name	Telephone	Telephone
Bill Gates	555 77 854	555 77 855

Vertical headers:

First Name:	Bill Gates
Telephone:	555 77 854
Telephone:	555 77 855

<ol>
<li>Coffee</li>
<li>Milk</li>
</ol>

</body>
</html>
```

Unordered list

- Coffee
- Milk

Ordered list

1. Coffee
2. Milk

# BLOCK VS. IN-LINE ELEMENTS

## • Block Elements:

- A block-level element is an element that creates large blocks of content like `<p>paragraphs </p>` or `<div>divisions </div>`.
- Block elements start new lines of text when you use them, and can contain other blocks as well as inline elements and text or data.

## • Inline Elements:

- An inline element is an element that define text or data in the document like `<b>BOLD</b>`
- Inline elements do not start new lines when you use them, and they generally only contain other inline tags and text or data, or they include nothing at all, like the `<br>` tag.
- Finally, inline elements may not be displayed at all, they simply effect the rest of the document. Such as `<style>`, `<meta>`, `<head>`.

# DIV TAGS

## <div> Element

- The HTML `<div>` element is a block-level element that can be used as a container for grouping other HTML elements.
- The `<div>` element has no special meaning. Except that, because it is a block level element, the browser will display a line break before and after it.
- When used together with CSS, the `<div>` element can be used to set style attributes to large blocks of content.

# DIV TAGS

## Example 1:

```
<!DOCTYPE html>
<html>
<body>

<p>This is some text.</p>

<div style="color:#0000FF">
  <h3>This is a heading in a div element</h3>
  <p>This is some text in a div element.</p>
</div>

<div style="color:#00FF00; text-align:center">
  <h3>This is a heading in a div element</h3>
  <p>This is some text in a div element.</p>
</div>

<p>This is some text.</p>
</body>
</html>
```

This is some text.

**This is a heading in a div element**

This is some text in a div element.

**This is a heading in a div element**

This is some text in a div element.

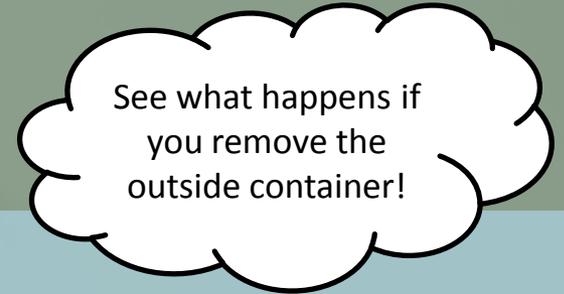

This is some text.

# DIV TAGS

## **<div> Element:**

- Another common use of the **<div>** element, is for document layout. It replaces the "old way" of defining page-layout using tables. Using tables is not the correct use of the **<table>** element. The purpose of the **<table>** element is to display tabular data.
  - Multiple columns are created by using **<div>** or **<table>** elements. (see next page)
  - CSS can be used to position elements, or to create backgrounds or colorful look for the pages.

# WEB PAGE LAYOUT

```
<!DOCTYPE html>
<html>
<body>
```

```
<div id="container" style="width:500px">
```

```
<div id="header"
  style="background-color:#FFA500;
  text-align:center;
  height:50px;
  width:500px;">
  <h1>Title of the page </h1>
</div>
```

```
<div id="leftnav";
  style="background-color:#FFD700;
  height:200px;
  width:100px;
  float:left;">

  <b>LeftNav</b><br>
  HTML<br>
  CSS<br>
  JavaScript<br>
  PHP
</div>
```

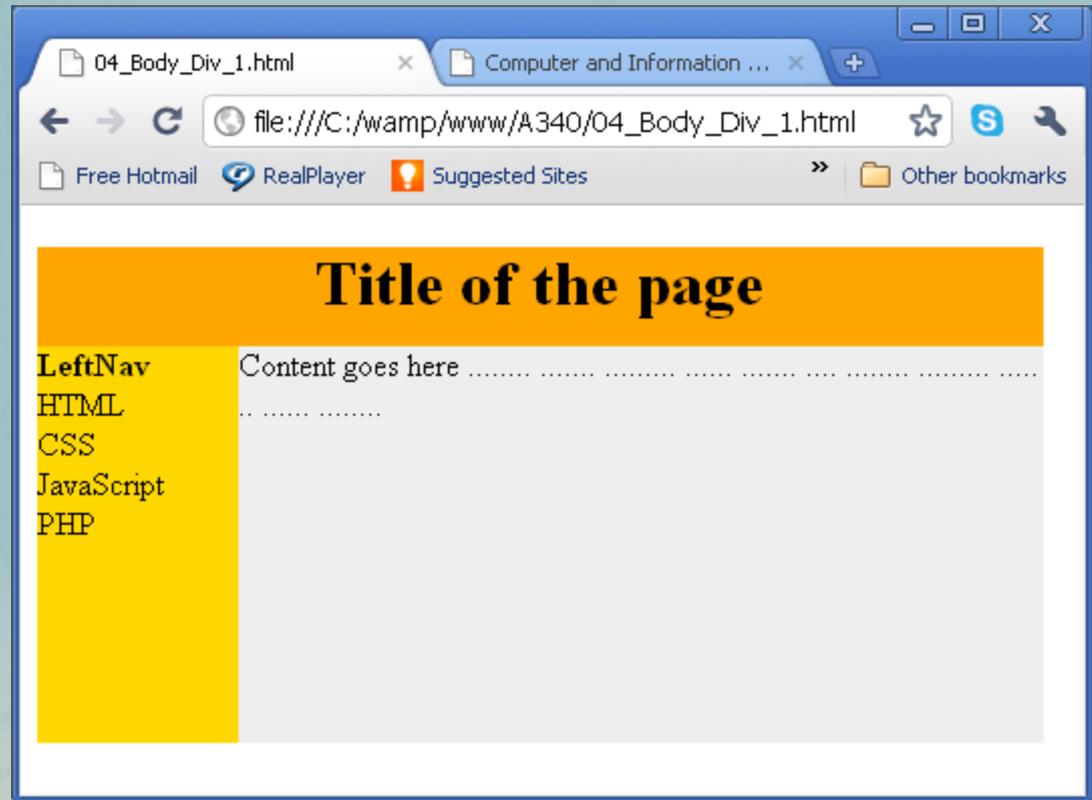

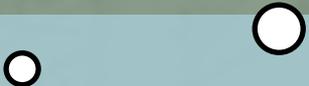

```
<div id="content";
  style="background-color:#EEEEEE;
  height:200px;
  width:400px;
  float:left;">

  Content goes here .....
  .....
</div>
```

```
</div>
```

```
</body>
```

```
</html>
```

# PAGE LAYOUT

Adding another <div>  
tag for the right nav.

```
<div id="rightnav";  
style="background-color:#33D700;  
height:200px;  
width:100px;  
float:right;">
```

```
<b>RightNav</b><br>  
News<br>  
FAQ<br>
```

```
</div>
```

# ADDING MORE CONTENT...

```
<!DOCTYPE html>

```

# AN INTRODUCTION TO WEB PROGRAMMING

Dr. Hossein Hakimzadeh  
Department of Computer and Information Sciences  
Indiana University  
South Bend, IN

# HTML E

# HTML FORMS

- HTML forms are used for **collecting data** (input) and interact with the user.
- Such data is then typically **passed to the server for processing or storage** in the database.

# HTML FORMS

- A simple HTML form:

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<form action="processform.php">
```

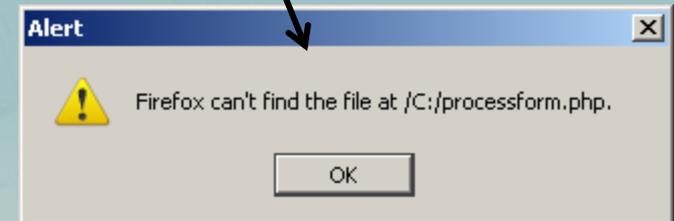

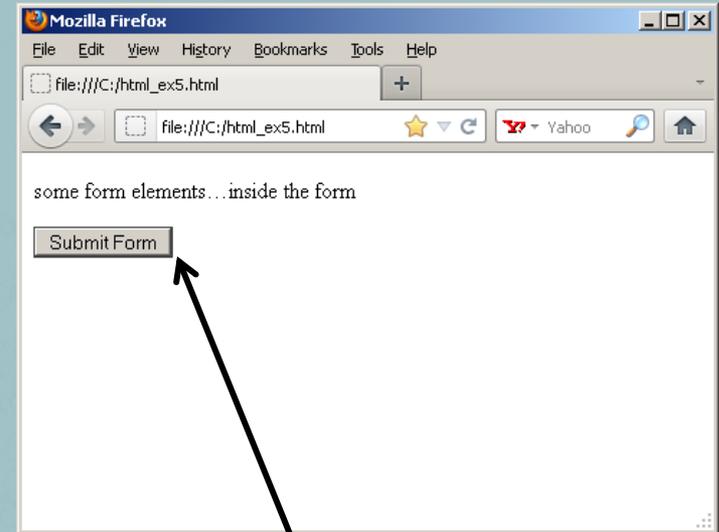

```
  <p>some form elements...inside the  
  form</p>
```

```
  <button> Submit Form </button>
```

```
</form>
```

```
</body>
```

```
</html>
```

# HTML FORMS

- Additional Form Attributes:

```
<form action = "processform.php"  
method = "get/post"  
target = "_self/_blank/etc.."  
etc...  
>  
<p>some form elements...inside the  
form</p>  
  
<button> Submit Form </button>  
</form>
```

**Who to call:**

when the form is submitted.

**What method to use to submit the data:**

The form-data can be sent as URL variables (with method="get") or as HTTP post transaction (with method="post").

**Where to display the response:**

\_self = current frame (default)  
\_blank = a new empty window or tab.

# USE OF POST METHOD

```
<!DOCTYPE html>
<html>
<body>

<form      action = "processform.php"
           method = "post"
           target = "_blank">

  <Label> Textbox: </label>
  <ul>
    <input
      type      = 'text'
      name      = 'TextBoxName'
      size      = '5'
      maxlength = '10'
      value     = '123' >
    </ul>

  <button> Submit Form </button>

</form>

</body>
</html>
```

```
<!DOCTYPE html>
<html>
<body>

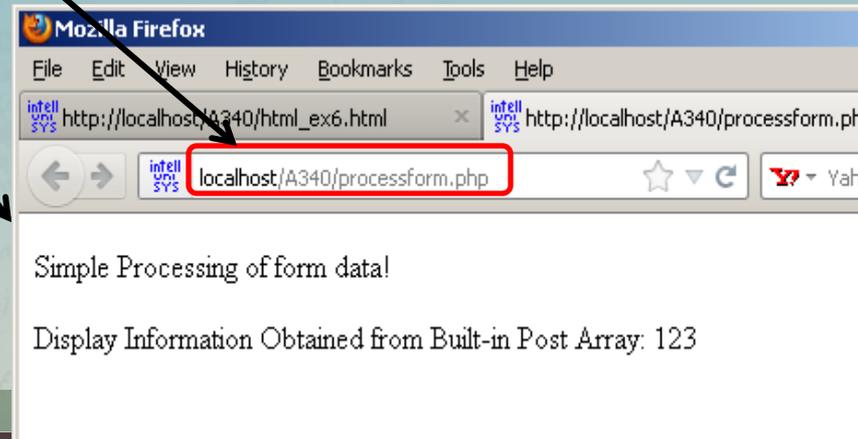

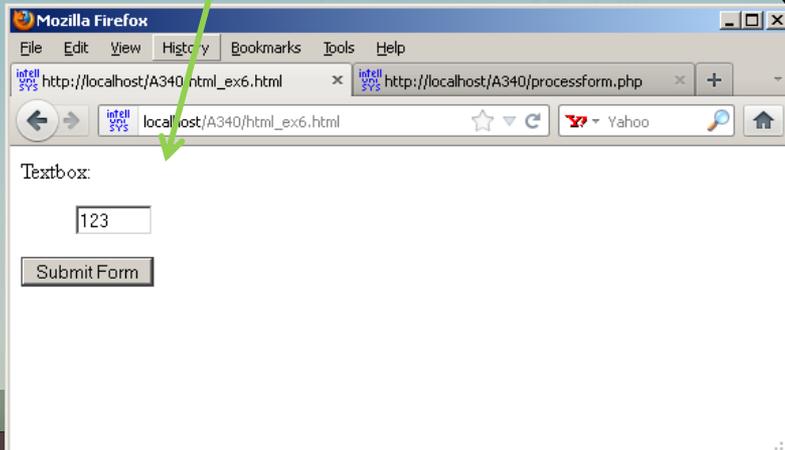

<p> Simple Processing of form data!</p>

</body>
</html>

<?php

echo ("Display Information Obtained from ");
if (isset($_GET['TextBoxName']))
  echo ("Built-in Get Array: " . $_GET['TextBoxName'] );

```

# HTML FORM ELEMENTS

- A typical form can consist of:

- Textboxes
- TextAreas
- RadioButtons
- CheckBoxes
- ComboBoxes
- Listboxes

**IU-RETAIN - Student Self Assessment**  
**Indiana University South Bend**  
**Approximate time needed: 8 Minutes**

We invite you to take part in a self-assessment survey. By answering the following questions you will help us better understand some of the reasons why you might be having academic difficulties in college, and allow us to develop effective strategies to try to help you and other students at Indiana University South Bend.

**Why did you choose Indiana University? (Mark all that apply)**

- Reputation of the university
- Reputation of the degree program (e.g., Nursing, Chemistry, Business, Computer Science, etc.)
- IUSB offers the degree program I want
- Received a scholarship or financial aid from IU
- Location is close to home
- Size of the campus, or classes
- Cost
- A friend recommended it
- My parents recommended it
- My high school counselor recommended it

**Was Indiana University South Bend your first choice?**

- Yes
- No

**How many other colleges besides IUSB did you apply to?**

None

**Do you plan to transfer to another school?**

- No, I plan to finish my degree here at IU South Bend
- Yes, I plan to transfer to another campus of IU
- Yes, I plan to transfer to a non-IU campus

**If you plan to transfer/leave prior to completing your degree, WHERE do you plan to go?**

# TEXTBOX

- A **TEXTBOX** can be created using an `<input>` element.
- `<input>` elements are typically used within a `<form>` element to obtain input from users.
- An input field can vary in many ways, depending on the `type` attribute.

Example:

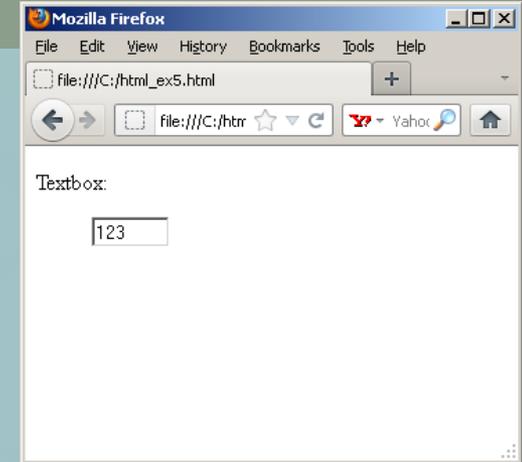

```
<!DOCTYPE html>  
<html>  
<body>
```

```
<p> Textbox: </p>  
<ul>
```

```
<input  
  type   ='text'  
  name   ='TextBoxName'  
  size   ='5'  
  maxlength='10'  
  value  ='xxx'
```

```
>  
</ul>
```

```
</body>  
</html>
```

# THE **TYPE** OF INPUT

The TYPE attribute in the input element can be:

- Text
- Textarea
- Email
- url
  
- Password
- Checkbox
- Radio
- number
- Range
  
- Button
- Reset
- Submit

## **Other:**

- Color
- Date
- Datetime
- datetime-local
- File
- Hidden
- Image
- month
- Search
- Tel
- time
- week

# HTML FORM

# FIELDSET

- The `<fieldset>` tag is used to group related elements in a form.
- The `<fieldset>` tag draws a box around the related elements.

```
<form action="processform.php">
```

```
<fieldset>
```

```
Last name: <input type="text" name="lname"><br>
```

```
Email: <input type="text" name="email"><br>
```

```
Your Homepage: <input type="url" name="homepage"><br>
```

```
Password: <input type="password" name="pwd" maxlength="8"><br>
```

```
</fieldset>
```

```
<hr>
```

```
<fieldset>
```

```
<label> Your Skills: </label> <br>
```

```
<input type="checkbox" name="skills" value="1"> Critical Thinking<br>
```

```
<input type="checkbox" name="skills" value="2"> Problem Solving <br>
```

```
<input type="checkbox" name="skills" value="3"> Communication <br>
```

```
</fieldset>
```

```
<hr>
```

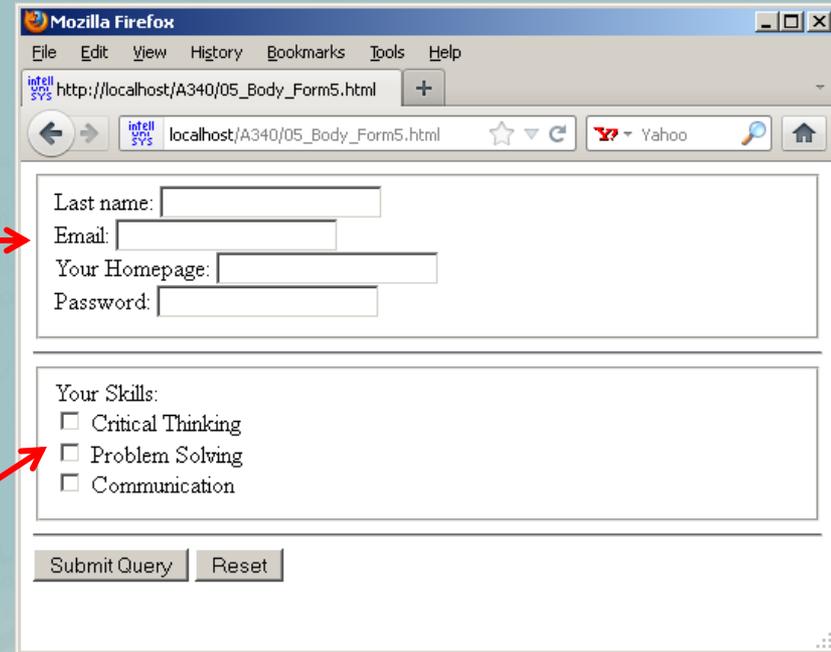

```
<input type="submit">
```

```
<input type="reset">
```

```
</form>
```

# FRAME / FRAMESET

- The `<frame>` and `<frameset>` tags are **not supported in HTML5**.
- The `<frame>` tag defines a window (frame) within a `<frameset>`.
- Each `<frame>` in a `<frameset>` can have different attributes, such as border, scrolling, the ability to resize, etc.

Source Code:	Submit Code »	Result:			
<pre>&lt;!DOCTYPE html&gt; &lt;html&gt;  &lt;frameset cols="25%,*,25%"&gt;   &lt;frame src="frame_a.htm"&gt;   &lt;frame src="frame_b.htm"&gt;   &lt;frame src="frame_c.htm"&gt; &lt;/frameset&gt;  &lt;/html&gt;</pre>		<table border="1"><tr><td><b>Frame A</b></td><td><b>Frame B</b></td><td><b>Frame C</b></td></tr></table>	<b>Frame A</b>	<b>Frame B</b>	<b>Frame C</b>
<b>Frame A</b>	<b>Frame B</b>	<b>Frame C</b>			

# IFRAME

- An iframe is used to display a web page within a web page.

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<iframe
```

```
  src="05_Body_Form4.html"
```

```
  width="500"
```

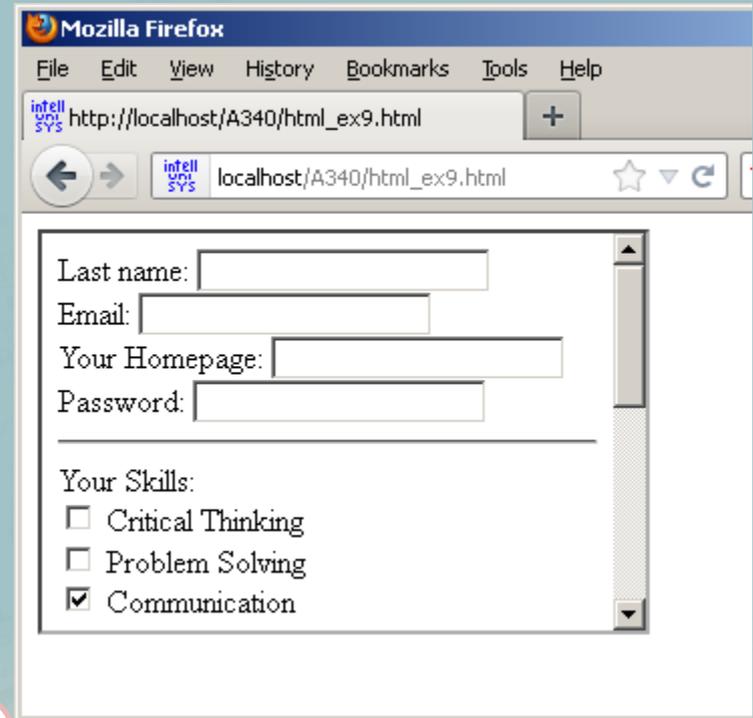

```
  height="200">
```

```
</iframe>
```

```
</body>
```

```
</html>
```

Additional attributes such as frameborder, align, scrolling, etc. can be added to the iframe.

# DISPLAYING VIDEOS (USING VIDEO TAG)

- The standards at this point are still a little loose.  
(Below only seems to work in Chrome)

```
<!DOCTYPE html>
```

```
<html>
```

```
<body>
```

```
<video width="320" height="240" controls autoplay>
```

```
<source
```

```
  src="../../../Development/videos/FransLanting_2005.mp4"
```

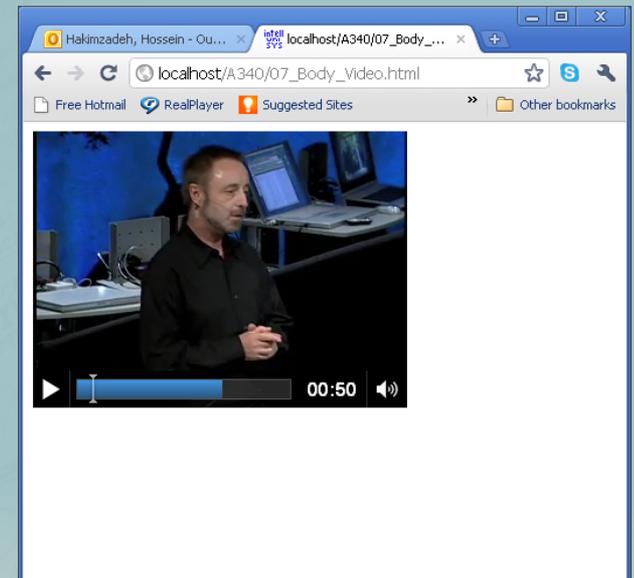

```
  type="video/mp4">
```

Your browser does not support the video tag.

```
</video>
```

```
</body>
```

```
</html>
```

# DISPLAYING VIDEOS (USING EMBED)

- The <embed> tag defines a container for an external application or interactive content (a plug-in).

```
<!DOCTYPE html>
```

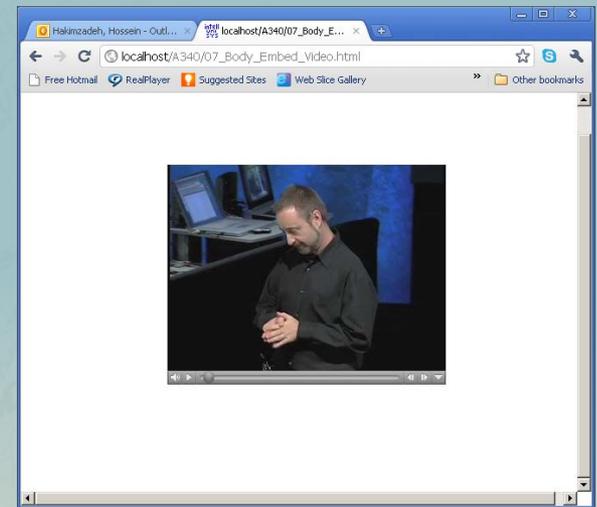

```
<html>
```

```
<body>
```

```
<embed src="../Development/videos/FransLanting_2005.mp4"  
width="640"  
height="480"  
autostart="TRUE"  
loop="TRUE"  
controller="TRUE"  
>
```

```
</body>
```

```
</html>
```
